ABSTRACT:

PURPOSE: To improve the operability of information processing by providing a window
display control means to execute control to display plural windows as keeping them not
overlapping each other and a selective window display control means to execute the
control to select and display an optional window.

CONSTITUTION: A tiling window display control means 8 executes the control to display
plural windows on a display device 4 as keeping them not overlapping each other. The
selective window display control means 9 executes the control to select and display the
optional window from among plural windows displayed on the display device 4. Thus, the
contents of the window hidden perfectly behind other window or the contents of a part of
the window hidden in a state that plural windows overlap partially each other can be
confirmed at a time, and in addition, the optional window can be selected from among the
displayed windows, and besides, the operation of the instruction for displaying plural
windows at a time becomes easy.
